CAREER OBJECTIVE

Motivated BE CSE student with a strong foundation in Python and growing interest in Artificial Intelligence. Seeking a Python + AI Intern role at Stats Perform to apply coding skills, work with AI copilots, and gain hands-on experience in real-world AI-driven systems.

EDUCATION

UNITED INSTITUTE OF TECHNOLOGY,COIMBATORE

Bachelor of Engineering in computer science

2023-2027

Related Coursework: Database Systems, programming in python, data structure and algorithms, operating system, machine learning fundamentals, introduction to artificial intelligence, Software Development

GPA: 7.8+/10

INTERNSHIP AND TRAINING

Data Science, Java & Python Intern

JANUARY 2025

Decibel Infotech, Coimbatore

- Gained exposure to latest technologies in Data Science, Java, and Python.
- Worked on data analysis fundamentals, including data preprocessing and basic visualization.
- Practiced Python programming for problem-solving and real-time use cases.
- Learned core Java concepts and their application in software development.
- Improved understanding of how data-driven solutions are applied in industry projects.

ARTIFICIAL INTELLIGENCE VIRTUAL INTERN

JUNE-JULY 2025

Codsoft

- Completed a 4-week virtual internship focused on Artificial Intelligence concepts.
- Worked on AI-based tasks and mini-projects to gain hands-on experience.
- Applied Python programming in AI problem statements.
- Strengthened knowledge of machine learning basics and logic building.
- Followed structured task-based learning with emphasis on practical implementation.

DATA SCIENCE INTERN

JULY - AUGUST 2025

NxtLogic software solution

- Successfully completed an internship in Data Science with real-world exposure.
- Learned data collection, cleaning, and analysis techniques.
- Worked with datasets to extract meaningful insights.
- Applied Python and analytical thinking to solve data-related problems.
- Gained practical understanding of industry-level data workflows.

DATA ANALYTICS JOB SIMULATION

JANUARY 2026

Deloitte(forage)

- Performed data analysis using forensic technology concepts to identify patterns and anomalies.
- Created an interactive data dashboard using Tableau to visualize key insights.
- Used Microsoft Excel to classify data and derive meaningful business insights.
- Applied analytical thinking to support data-driven decision making in a simulated consulting environment.

SKILLS

programming Language: Java, Python, AIML ,C , C++

Ai/ML basics: Machine learning fundamentals, model training basic

Libraries: NumPy, Pandas,Matplotlib(basic)

Database: MySQL

Tools: Git, gitHub , VS code , springboot

CERTIFICATIONS

- Udemy: The Complete Python Bootcamp - Zero to Hero
- One-day Workshop: Web Development (GeeksforGeeks KAHE, Feb 2025)
- Participant: UIT Intra-Collegiate Hackathon (Feb 2025)
- HP LIFE: Data Science & Analytics

PROJECTS

- Image Captioning using CNN-LSTM – Built an AI model to generate captions for images using CNN feature extraction and LSTM sequence modeling.
 - Recommendation System – Developed a Python-based recommendation system using similarity techniques to
 - Tic-Tac-Toe AI – Implemented an AI agent using the Minimax algorithm to play Tic-Tac-Toe optimally.
 - Simple Chatbot – Created a rule-based chatbot in Python for basic user interaction and query handling.
 - College FAQ Chatbot – Designed a Python chatbot to answer college-related FAQs, improving information accessibility.
 - Weather App – Built a Python application that fetches and displays real-time weather data using APIs.
-

strength

- Willingness to learn and adapt
 - consistent practice mindset
 - Strong problem-solving mindset
 - Quick learner and adaptable
 - Good logical thinking
 - Consistent practice and self-motivated
 - Ability to learn new technologies quickly
 - Good debugging and analytical skills
 - Team player with clear communication
 - Hands-on project experience
-

Language known

- English
 - Tamil
-

Coding Practice

- Practicing problem-solving using Java and Python Focused on strengthening DSA fundamentals Improving logic building and algorithmic thinking

Project Learning Highlights

- Implemented algorithmic logic using Java and Python
- Worked with backend-style data handling
- Improved debugging, optimization, and code structuring skills
- Gained exposure to AI-assisted coding tools

Area Of Interest

- Software Development Engineering
- Backend Development
- Data Structures & Algorithms
- AI-assisted development tools

Self-Learning Initiatives

- Actively strengthening Java fundamentals for SDE roles
 - Practicing DSA concepts through hands-on coding
 - Exploring AI tools to improve development productivity
-

Availability

- Available for full-time internship (8–10 months)
 - Immediate joining / as per company requirements
 - Flexible with work location and schedule
-

Declaration

I hereby declare that the information provided above is true to the best of my knowledge.
